

Based on Latest syllabus of
Rajasthan Technical University, Kota and other Universities
[Semester-I & II]

Practical Engineering Chemistry

Yasmin

Chetna Gomber

Suresh C. Ameta

Shipra Bhardwaj

Ritu Vyas

ABOUT THE BOOK

This book deals with the First year B.E. Program of Rajasthan Technical University, Kota and other Universities of Rajasthan, Basics of various topics have been given alongwith applications in a language, which is easy to understand. A number of questions and their answers given at the end ensures an adequate revision of the subject. A number of important appendices have been added to make the book as informative as possible to the students.

ABOUT THE AUTHORS

Professor SURESH C. AMETA is Former Professor & Head of Chemistry and Dean, Post-Graduate Studies, Mohanlal Sukhadia University, Udaipur (Raj.). He has Thirty Eight years experience of teaching and research. He has successfully guided 56 Ph.D. Students and published more than 250 research papers in Journals of National and International repute. He has received number of awards in his career and served on the coveted position of President, Indian Chemical Society, Kolkata (2000-01).

Dr. YASMIN is working as Professor, Department of Chemistry, Techno-India NJR Institute of Technology, Udaipur (Raj.). She has Eleven years of teaching experience. She has three books on Engineering Chemistry and Environmental Science & Engineering to her credit.

Dr. SHIPRA BHARDWAJ is working as Sr. Lecturer, Department of Chemistry, M.P. Govt. P.G. College, Chittorgarh (Raj.). She has Ten years of teaching experience. She has two books on Environmental Science to her credit.

Dr. CHETNA GOMBER is working as Associate Professor & Head, Department of Chemistry, Jodhpur Institute of Engineering & Technology, Jodhpur (Raj.). She has Ten years of teaching experience.

Dr. RITU VYAS is working as Lecturer, Department of Chemistry, Pacific Institute of Technology, Udaipur (Raj.). She has Six years of teaching experience.

ALSO OF INTEREST

Basic Physics – Kalra, Saraswat & Singh

Basic Mathematics – Purohit & Saraswat

Physics for Engineers (Semester-I) – Saraswat & Jain

Engineering Physics (Semester I & II) – Saraswat & Jain

Practical Physics – Venugopalan & Saraswat

Engineering Mechanics – Trilok Gupta

Power Electronics (with MATLAB) – Kumar, Joshi & Bansal

Engineering Chemistry (Semester-I) – Ameta, Yasmin, Bhardwaj, Gomber & Vyas

Engineering Chemistry (Semester I & II) – Ameta, Yasmin, Bhardwaj, Gomber & Durgawat

A Course in Electrical and Electronics Engineering – Gupta, Jain & Paneri

Digital Electronics – Saraswat

Basic Environmental Engineering – Ameta, Durgawat, Mehta, Vyas & Sharma

Rs. 150.00

Contents

GENERAL LABORATORY INSTRUCTIONS AND PRECAUTIONS	1
1. VOLUMETRIC ANALYSIS	10
Water	16
Experiment-1 ✓	17
Determination of hardness of water by complexometric method using EDTA.	
Experiment-2	20
Determination of total hardness of water by soap titration method (Clark's method).	
Experiment-3	23
Determination of hardness of water by 'O' Hehner's method.	
Experiment-4	26
Determination of available chlorine in a sample of bleaching solution.	
Experiment-5 ✓	29
Determination of amount of free chlorine in a given water sample.	
Experiment-6	32
Determination of dissolved NH_3 in a given water sample.	
Experiment-7	34
Determination of dissolved carbon dioxide in a given sample of water.	
Experiment-8 ✓	36
Determination of strength of Na_2CO_3 and NaOH from a solution of their mixture. (Double indicator method).	
Experiment-9 ✓	40
Determination of dissolved oxygen (D.O.) content in given sample of water by Winkler's method.	

Experiment-10 To measure the concentration of fluorides in a water sample	43
Experiment-11 To measure the concentration of nitrates in a water sample by Spectrophotometric and Titrimetric methods	46
Experiment-12 Determination of biological oxygen demand (BOD) of given waste water sample.	51
Experiment-13 Determination of chemical oxygen demand (COD) of a waste water sample.	55
Experiment-14 ✓ Determination of strength of copper sulphate solution iodometrically.	58
Experiment-15 Determination of strength of potassium dichromate ($K_2Cr_2O_7$) solution iodometrically.	61
Experiment-16 ✓ Determination of strength of ferrous ammonium sulphate (FAS) solution using N-phenyl anthranilic acid as an internal indicator.	64
Experiment-17 Determination of strength of ferrous ammonium sulphate (FAS) solution using potassium ferricyanide as an external indicator.	67
Experiment-18 Determination of strength and purity of ferrous ammonium sulphate (Mohr's salt).	70
Experiment-19 Determination of percentage of MnO_2 in pyrolusite sample.	73
Experiment-20 Determination of strength and percentage purity of given sample of common salt (Argentometric Titration).	75

2. GRAVIMETRIC ANALYSIS : Introduction	77
Experiment-21 Estimation of barium as barium sulphate.	83
Experiment-22 Estimation of silver as silver chloride.	86
3. PHYSICO-CHEMICAL ANALYSIS	89
(i) Surface Tension and Viscosity : Introduction	89
Experiment-23 ✓ Determination of the viscosity of lubricating oil by Redwood viscometer.	90
Experiment-24 Determination of relative viscosity of liquid with respect to water at room temperature by Ostwald's viscometer.	94
Experiment-25 Determination of relative surface tension of liquid with respect to water at room temperature by stalagmometer.	97
Experiment-26 ✓ Determination of flash and fire point of lubricating oil by Pensky-Martin apparatus.	101
Experiment-27 ✓ Determination of cloud and pour point of a given lubricating oil by cloud and pour point apparatus.	103
(ii) Fuel : Introduction	105
Experiment-28 Determination of calorific value of solid fuel using Bomb calorimeter.	107
Experiment-29 ✓ Determination of moisture, volatile matter, ash and fixed carbon in a given coal sample by proximate analysis.	112
(iii) pH Metric Measurement : Introduction	115
Experiment-30 ✓ To measure the pH of given water samples.	119

Experiment-31	
To determine the strength of given HCl solution pH metrically.	121
(iv) Conductometric Analysis : Introduction	
Experiment-32	
To determine the strength of given unknown HCl solution using conductometric analysis.	124
Experiment-33	
To measure the conductivity of water sample	129
Experiment-34	
To determine the equivalence conductance and dissociation constant of the weak electrolyte <i>i.e.</i> acetic acid (CH_3COOH).	132
Experiment-35	
To determine the equivalence conductance of a strong electrolyte (eg. NaCl, KCl, AgNO_3 , HCl, KNO_3 etc.) at different concentrations and hence verify the Onsagar's equation.	134
4. PHYSICO-CHEMICAL INSTRUMENTAL ANALYSIS	136
(i) Spectrophotometric Analysis : Introduction	
Experiment-36	
To determine (a) λ_{max} of a solution of cobalt chloride (CoCl_2). $5\text{H}_2\text{O}$ (b) Verify Beer's law and apply it to find the concentration of a given unknown solution by spectrophotometer.	138
(ii) Flame Photometry : Introduction	140
Experiment-37	
To determine the amount of Na and K in a given sample by flame photometer.	144
5. VIVA – VOCE	146
6. PREPARATION OF SOLUTIONS	
(A) Acid Solutions	149
(B) Alkali Solutions	172
(C) Buffer Solutions	172
(D) Indicator Solutions	172
(E) Other Solutions	173
(F) Cooling Mixtures	174
APPENDIX	176
	177
